PROFILE SUMMARY

Software Developer | AI & Web Technologies

Full stack developer, Master in Applied Computer Science, with professional experience of Typescript/Node.js, React and C#/.NET. I developed production REST APIs, multi-tenant data layers in PostgreSQL, and OAuth 2.0 integrations. Also, built an AI decision support system for an enterprise crisis management tool, powered by LLM. Experience with agile teams with mandatory code review and CI gated automated tests. Converting business requirements into well tested working software.

WORK EXPERIENCE

Gotomaxx Software GmbH.

Fullstack Software Developer

Hauenstein, Rhineland-Pfalz

05/2026 – 09/2026

- **Built the archive application end-to-end:** Created an innovative document management system from scratch with a backend created using .NET 10 / ASP.NET Core and a frontend implemented with React 19 / TypeScript. Built document previewing, file explorer views, cross-tray faceted search, retention management, thumbnailing (libvips / pdf.js), and staged ZIP exporting capabilities to storage.
- **Architected inbound email and OAuth integrations:** email intake shipped via an IMAP poller and provider webhooks (Postmark, Lettermint) and Microsoft Entra ID and Google Workspace OAuth 2.0 flows with encrypted refresh-token storage and XOAUTH2 authentication over IMAP/SMTP.
- **Owned multi-tenant data-layer changes:** authored 5 EF Core migrations covering archive retention, OAuth mailbox connections, and operation dispatch priority, each applied across both PostgreSQL and SQLite providers under expand/contract rules; replaced a full-table client-side partner list with server-side keyset pagination and infinite scroll, removing an unbounded query from the hot path.
- **Standardized frontend architecture and test coverage:** cut UI duplication through reusable design-system components (DataView, custom radio groups, unified navigation) and extended the team's unit and Aspire-orchestrated integration suite with OAuth stubs and provider-parity tests gating every merge.
- **Delivered consistently on a 5-engineer team:** 103 pull requests merged and 107 issues closed, plus 17 teammate pull requests reviewed, in a service exposing 566 REST endpoints over 5 PostgreSQL databases.

Medical Equipment Europe

UI and Software Developer (Werkstudent)

Hammelburg, Bavaria

11/2024 – 09/2025

- Migrated legacy Windows Forms application to Windows Presentation Foundation in .NET 5.0, designed following with the MVC pattern in C# and XAML for ease of maintenance and visual coherence.
- Rebuilt application interface for accessibility and usability, standardizing the layouts and interaction patterns across the screens. Added in-app document handling. Added PDF preview and print functionality. Third-party libraries compatible with .NET.
- Worked in a cross-functional Agile team, using Git and contributing through iterative release cycles.

Previsec

AI and Full stack Developer (Master's Thesis)

Darmstadt, Hessen

1/2025-7/2025

- Built an AI-driven summarization and decision-support system for Previsec's Crisis Management Tool using locally hosted LLMs (Llama 3.2 and others via Ollama), keeping incident data on-premises.
- Developed the multi-tenant AI configuration service using TypeScript, Node.js, PostgreSQL and Redis. I integrated the multi-tenant AI configuration service into an Incident Management Tool built with React and Bootstrap.
- Containerized the stack with Docker and implemented GitLab CI/CD for automated deployments and model updates.

Lensing.AI (Previously Everest Systems)

Application Developer (Werkstudent)

Heidelberg, Baden-Württemberg

7/2023- 9/2024

- Used TypeScript and JavaScript for developing backend services of high performance that would help in building cloud-based ERP system product (Everest ERP).
- Developed and maintained backend services, ensuring robust data management and seamless integration.
- Expanded Rest APIs using Postgres SQL to enhance system functionality and improve data retrieval efficiency.
- Integrated External Rest APIs and services to enhance ERP system capabilities and streamline operations.

Infosys Ltd.

Operations Executive (IT Software Support)

Pune, MH (India)

10/2020- 5/2022

- Offered support for Middleware Layer with the help of IBM WebSphere MQ, MQ Application Framework, IBM MQ Explorer, and UNIX Commands.
- Versatile Java Spring Boot developer with a proven track record of developing high-performance Web applications.
- Proficient in Spring Boot and Angular for developing applications effortlessly.

EDUCATION

Hochschule Schmalkalden

Candidate for *Masters of Science* in Applied Computer Science

Schmalkalden, Thüringen

8/2025

Areas of Interest: Software Development, Natural Language Processing, LLMs, AI, Android Application Development, UI design

The Bhopal School of Social Sciences

Candidate for *Bachelors of Computer Applications*

Bhopal, MP (India)

9/2020

Areas of Interest: Software Development, Web Development, DSA

PROJECTS

NewsLens (AI Research Agent) project

- **Architected an Autonomous News Research Agent (FastAPI, Python):** Engineered a bounded agentic research loop that retrieves web coverage via Tavily, screens candidate sources for domain integrity, and safely parses HTML documents with SSRF protections to eliminate hallucinated sources.
- **Implemented Evidence-Grounded LLM Synthesis (Ollama, Gemma 3):** Integrated local LLM inference with deterministic extractive fallbacks to map claims to cited source IDs, classify verification statuses (*Supported, Disputed, Insufficient Evidence*), and explicitly preserve nuances and uncertainty.
- **Built an Observability-Focused Research Dashboard (JavaScript, CSS3, REST API):** Developed a responsive, editorial UI featuring real-time agent execution traces, step-by-step decision logs, and structured reports that prioritize news summaries, key claims, and established facts

Job Summary NLP project

4/2023- 7/2023

- Managed a Human-Machine Interaction project in a team of three people that used NLP methods to summarize and create visualizations of similar job offers for users.
- Worked on a text analysis and summarization project using Python libraries such as SpaCy and NLTK.
- Built an intuitive software interface using Flask to display summaries of job offers.

SKILLS & INTERESTS

Programming Languages: C#, TypeScript, JavaScript, Java, Python, SQL

Backend: .NET / ASP.NET Core, Entity Framework Core, Node.js, Spring Boot, REST API design, OAuth 2.0, FastAPI

Frontend: React, Next.js, WPF / XAML, Angular, HTML & CSS

Data: PostgreSQL, MySQL, SQLite, Redis, TypeORM, EFCore, Pydantic

DevOps & Tools: Docker, Git, GitHub Actions, GitLab CI/CD, Jira, Confluence, Agile, pytest

AI: AI Agents/ Agentic Workflows, Locally hosted LLMs (Ollama), spaCy, NLTK, Claude Code, Codex

Design: Adobe Photoshop, Illustrator, Adobe XD

Interests: Gaming, tech, photography
